

# Junior Network Engineer

We're looking for **Junior Network Engineers** who want to join our team **in Cluj-Napoca**, to help us develop new products, test, improve and maintain them in a « rapid prototyping » & open-systems environment.

iBrowse runs an international network for thousands of clients, and supports their communications needs for mission-critical applications.

## Benefits:

- being a part of a talented, engaged and enthusiastic team
- you get to learn best practices while becoming an expert in the telecom field
- possibility to travel/work at our Paris office
- medical subscription
- fun times with the team (teambuilding, parties)

## Responsibilities:

- use diversified tools to monitor and provision computer systems and networks
- troubleshoot issues, track and document defects and resolutions in details
- escalate to potential partners or suppliers when needed
- participate in the development of new products based on customer request

## Requirements:

- your English language skills need to be advanced; French is a plus
- basic understanding of computer networks (routing and switching, IP, ARP, TCP/UDP transport protocol)
- enthusiastic, communicative engineer who is committed to finding great technical solutions to everyday problems
